		☐	Chronopost	€ 0.00	kg 0.000	€ 0.00	kg 0.000

2. Choose a default carrier for each zone

The module will base on this carrier to calculate free shipping when the carrier has not been selected yet by customers in cart. If customers have not selected yet a zone nor a carrier, the module will base the calculation of free shipping on the default zone and the default carrier assigned to this zone.

FAQ –COMMON ERRORS

All the common errors about this module have been reported below and we explain to you in details how to solve them.

Please read the section that corresponds to your problem BEFORE getting in touch with us, you will probably find the answer to your problem in it.

I) <u>I don't manage to install the module</u>	<u>8</u>
1.1 <u>File too large</u>	<u>8</u>
1.2 <u>Directory not writable</u>	<u>8</u>
1.3 <u>Method already overridden</u>	<u>8</u>
II) <u>Shipping is not free is my cart</u>	<u>10</u>
III) <u>No message appears in cart</u>	<u>11</u>
IV) <u>Impossible to save the configuration (empty fields)</u>	<u>11</u>

If the problem you are having is not listed, then please get in touch with us.

I) I don't manage to install the module

1.1 File too large

When installing the module, you may encounter this error message:

*File too large (limit of ***** bytes)*

Reason of the error: The problem comes from the value of your 'upload_max_filesize' variable that is not large enough compared to the module size.

To solve the problem, you can either :

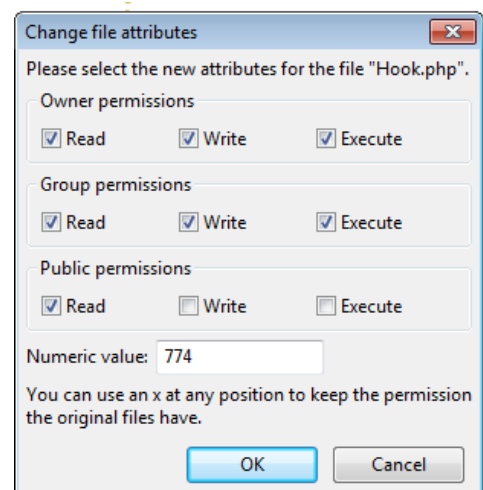

- Go to your FTP and increase the value of your 'upload_max_filesize' variable in the file "/config/ config.inc.php" or in the file "php.ini"
ini_set('upload_max_filesize', '100M');
- Or install the module directly from your FTP, you just need to unzip the module zip file and copy/paste the folder "lgfreeshippingzones" inside the folder "modules" of your FTP (the module will appear in your back-office as soon as the module folder is added into the "modules" folder).

1.2 Directory not writable

When installing the module, you may encounter this error message: *lgfreeshippingzones: Unable to install override: Directory not writable*

Reason of the error: The module needs to install a file on your shop (required to make sure the module work) but the current configuration of your server prevents the module from installing this file.

To solve the problem: Change the permissions of your FTP and add writing permission to the « override » folder and the files inside.

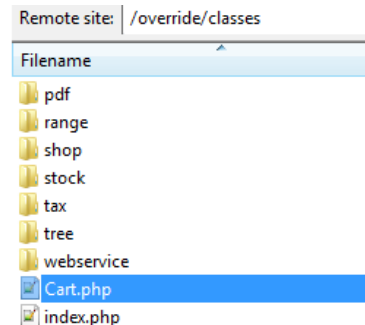

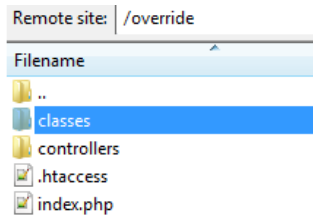

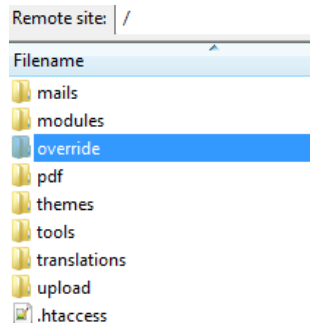

1.3 Method getPackageShippingCost already overridden

When installing the module, you may encounter this error message: *lgfreeshippingzones: Unable to install override: The method getPackageShippingCost in the class Cart is already overridden*

Reason of the error: On PrestaShop 1.5 and 1.6, the module automatically creates an override (required to make sure the module work) inside the folder override/classes/Cart.php. The problem is that you already have an override with the same name (created by another module), which prevents our module from installing.

To solve the problem, you have to:

- a) Connect to your FTP
- b) Go to the folder *Override* → *Classes* and find the file *Cart.php*

- c) Rename the file *Cart.php* to *Cart2.php*
- d) Go to your backoffice and install the free shipping module

Shipping and Logistics

Free Shipping / Delivery by Zone, Carrier, Price and Weight v1.3.3 - by Línea Gráfica

Set free shipping for different zones, carriers, price and weight interval.

- e) The module will be installed and a new file *Cart.php* will be created on your FTP
- f) Combine both overrides manually : open the old override *Cart2.php*, copy its content and paste it into the new override *Cart.php*

Warning :

To do it correctly, it's important to respect the file structure

```
class Hook extends HookCore
```

```
{  
    function A  
    {  
        [...]  
    }  
    function B  
    {  
        [...]  
    }  
    [...]  
}
```

If you also have the same functions in the old override, don't duplicate the functions but combine them

II) Shipping is not free in my cart

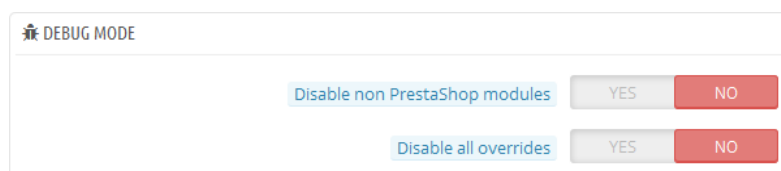

2.1. FTP controls

- Make sure that the file `/override/classes/Cart.php` exists
- Make sure that this file contains the word “`lgfreeshippingzones`”
- Go to the folder `Cache` and delete the file `class_index.php` if there is one

2.2. Back-office controls

- Make sure that the non PrestaShop modules and the overrides are not disabled (**PS 1.6 only**).

You should have the same configuration as this (menu *Advanced parameters* → *Performance*) :

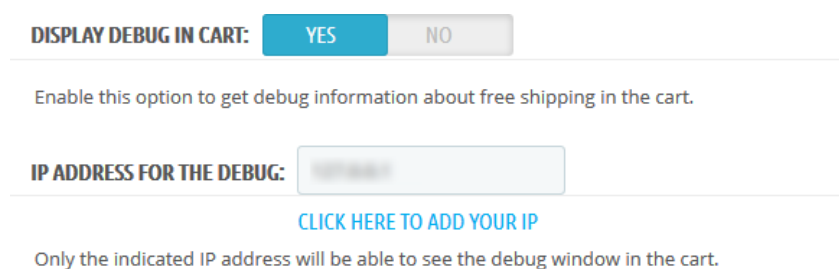

DEBUG MODE

Disable non PrestaShop modules YES NO

Disable all overrides YES NO

- Make sure that your handling charges are at 0 in the menu *Shipping* → *Preferences* (PS 1.6) or menu *Shipping* → *Shipping* (PS 1.5)

2.3. Enable the Debug module in the module for your IP address

DISPLAY DEBUG IN CART: YES NO

Enable this option to get debug information about free shipping in the cart.

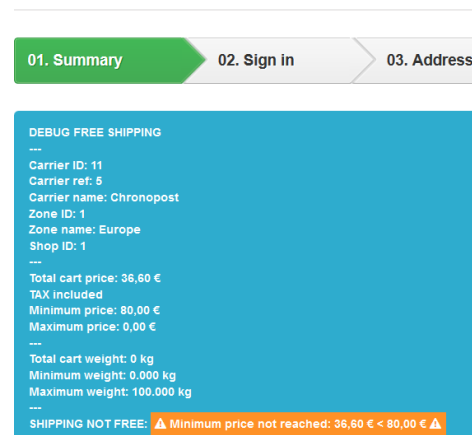

IP ADDRESS FOR THE DEBUG:

[CLICK HERE TO ADD YOUR IP](#)

Only the indicated IP address will be able to see the debug window in the cart.

- Make sure that free shipping is set for the current zone, carrier and shop
- Make sure that the price or weight set is reached and not exceeded
- If the carrier or the zone is “Undefined”, please modify the module configuration
